Door opening measurement

Wall thickness measurement

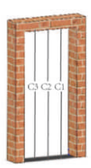

Measurement data:
A1 Left wall thickness
A2 Right wall thickness
A3 Top wall thickness
2 measurement points on the left
2 measurement points on the right
and 2 measurement points on the top

Wall width measurement

Measurement data:
B1 width of middle and lower door opening
B2 width of middle and middle door opening
B3 width of middle and top door opening
3 measurement points to the left
3 measurement points to the right
3 measurement points to the top
Fill in the data: Minimum of 3 values

Wall height measurement

Measurement data:
C1height of Middle right door opening
C2height of Middle middle door opening
C3height of Middle left door opening
3 measurement points to the left
3 measurement points to the right
3 measurement points to the top
Fill in the data: Minimum of 3 values

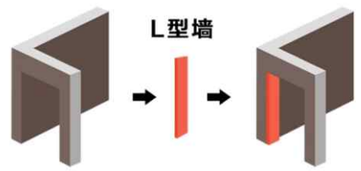

Measurement considerations:

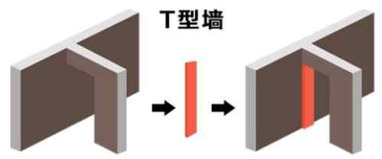

1、The error does not exceed 10mm during measurement. More than 10mm need to be re-measured.

2、Need to pay attention to whether the wall needs to be decorated when measuring the thickness of the door opening, Such as kitchen, balcony, bathroom, etc. need to increase the thickness of decoration materials

3、During the measurement, pay attention to the ground treatment and reserve the thickness of the ground decoration materials.

(The measurement method is for reference only, and it depends on the actual situation on site)

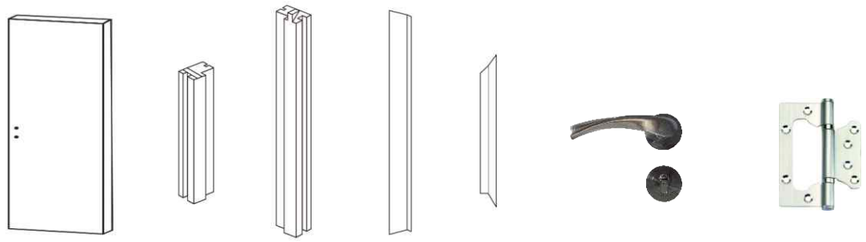

NOTE:

For special L-shaped wall and T-shaped wall, fake wall (orange part) should be made before installation, the width should be no less than 30mm ~ 40mm (otherwise, door frame and door framer archotrave cannot be installed)

30mm~40mm: The width of the measured door opening should be subtracted from the width of the fake wall 30mm ~ 40mm

Instruction For Installation

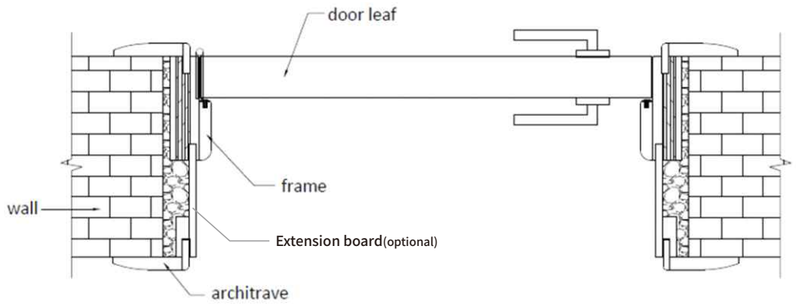

1.Part of door installation

Ax1 Bx1 Cx2 Dx4 Ex2 Fx1 Gx3

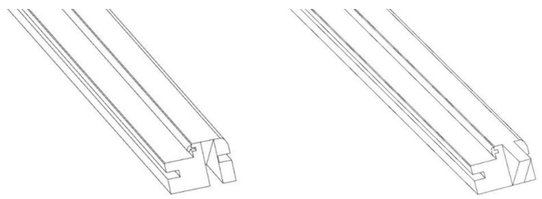

2.Installation of frame and architrave

2.1 Installation complete diagram,as Item 1:

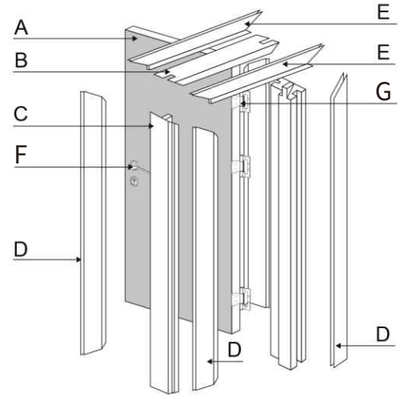

Item1

Step 1:
The frame using the 45 degree angle and groove joint ways, put the adjustable board frame. as Item 2 and Item 3:

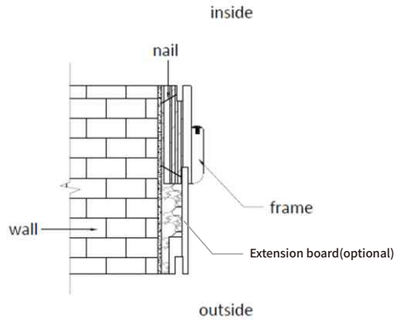

Item2

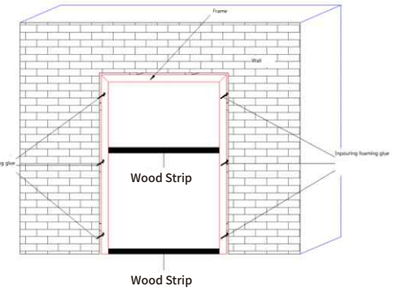

Item3

Step 2:
（1）Push the assembled frame into wall hole, keep it upright of both sides. Make the frame and wall fixed with nails. As Item 4.

（2）Use a wood strip to support the frame and ensure it upright. Inpouring the foaming glue beside the frame and wall. As Item 5.

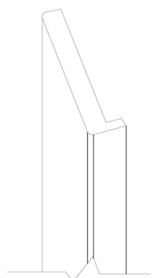

Item4

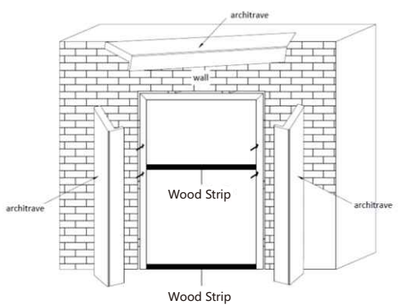

Item 5

Step 3:
（1）Architrave need to be cut by small cutting machine according to the actual length. One end of the longer architrave should be cut as 45°. As Item 6 ;

Item 6

（2）Architrave also can adjust the wall thickness. Applying glass glue on the back of architraves, then fix with frame. As item 7:

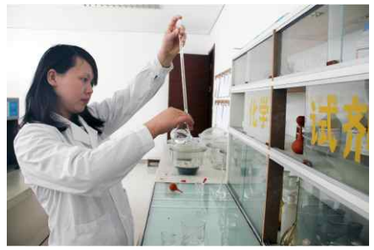

Item 7
